

Haute-Couture for your swimming pool, protection granted

Retractable Barriers for Swimming Pools - Creation, Installation, Renovation of Swimming Pool Environments

DIODON[®]

www.diodonsystems.com

Welcome to the universe of

When men merge ideas to create a unique concept
You have the jewel we create its case

40 years of excellence

The French metal manufacturer, Les Ateliers de Yèbles, has brought its expertise of stainless steel working to create Diodon®.

Men who believe

Diodon® is not only a concept; it is the encountering of a manufacturer, André Delaplace, and an inventor, Gerard Orrière, who teamed up to reach a simple goal: offering the safest, the most efficient and most aesthetic solution on the market in terms of security and swimming pool design.

Security above all

US market is one of the most "exigent" of all. It is not because that you want to enjoy your bathing that you should put security aside. Diodon® meets every standard across the United States and is now giving the right not to choose between the ones you love and the beauty of your garden.

Diodon®'s system relies on an elegant retractable barrier which secures perfectly your environment and disappears cleverly in between the slats of a wood or stone deck. The deck is 4'4" wide and allows you to benefit from a harmonious environment. The barrier is made of stainless steel and can be raised or lower in no time if you are to answer the phone or leave home for a longer period of time by pressing a simple button on a remote control.

Diodon can suit every swimming pool

The best protections are the most efficient... and discreet. Diodon®'s structure in itself allows you to secure every type of swimming pool - rectangular, free forms, overflows - whether it is to be built or that you are willing to give your existing swimming pool a face lift. A French Riviera face lift...

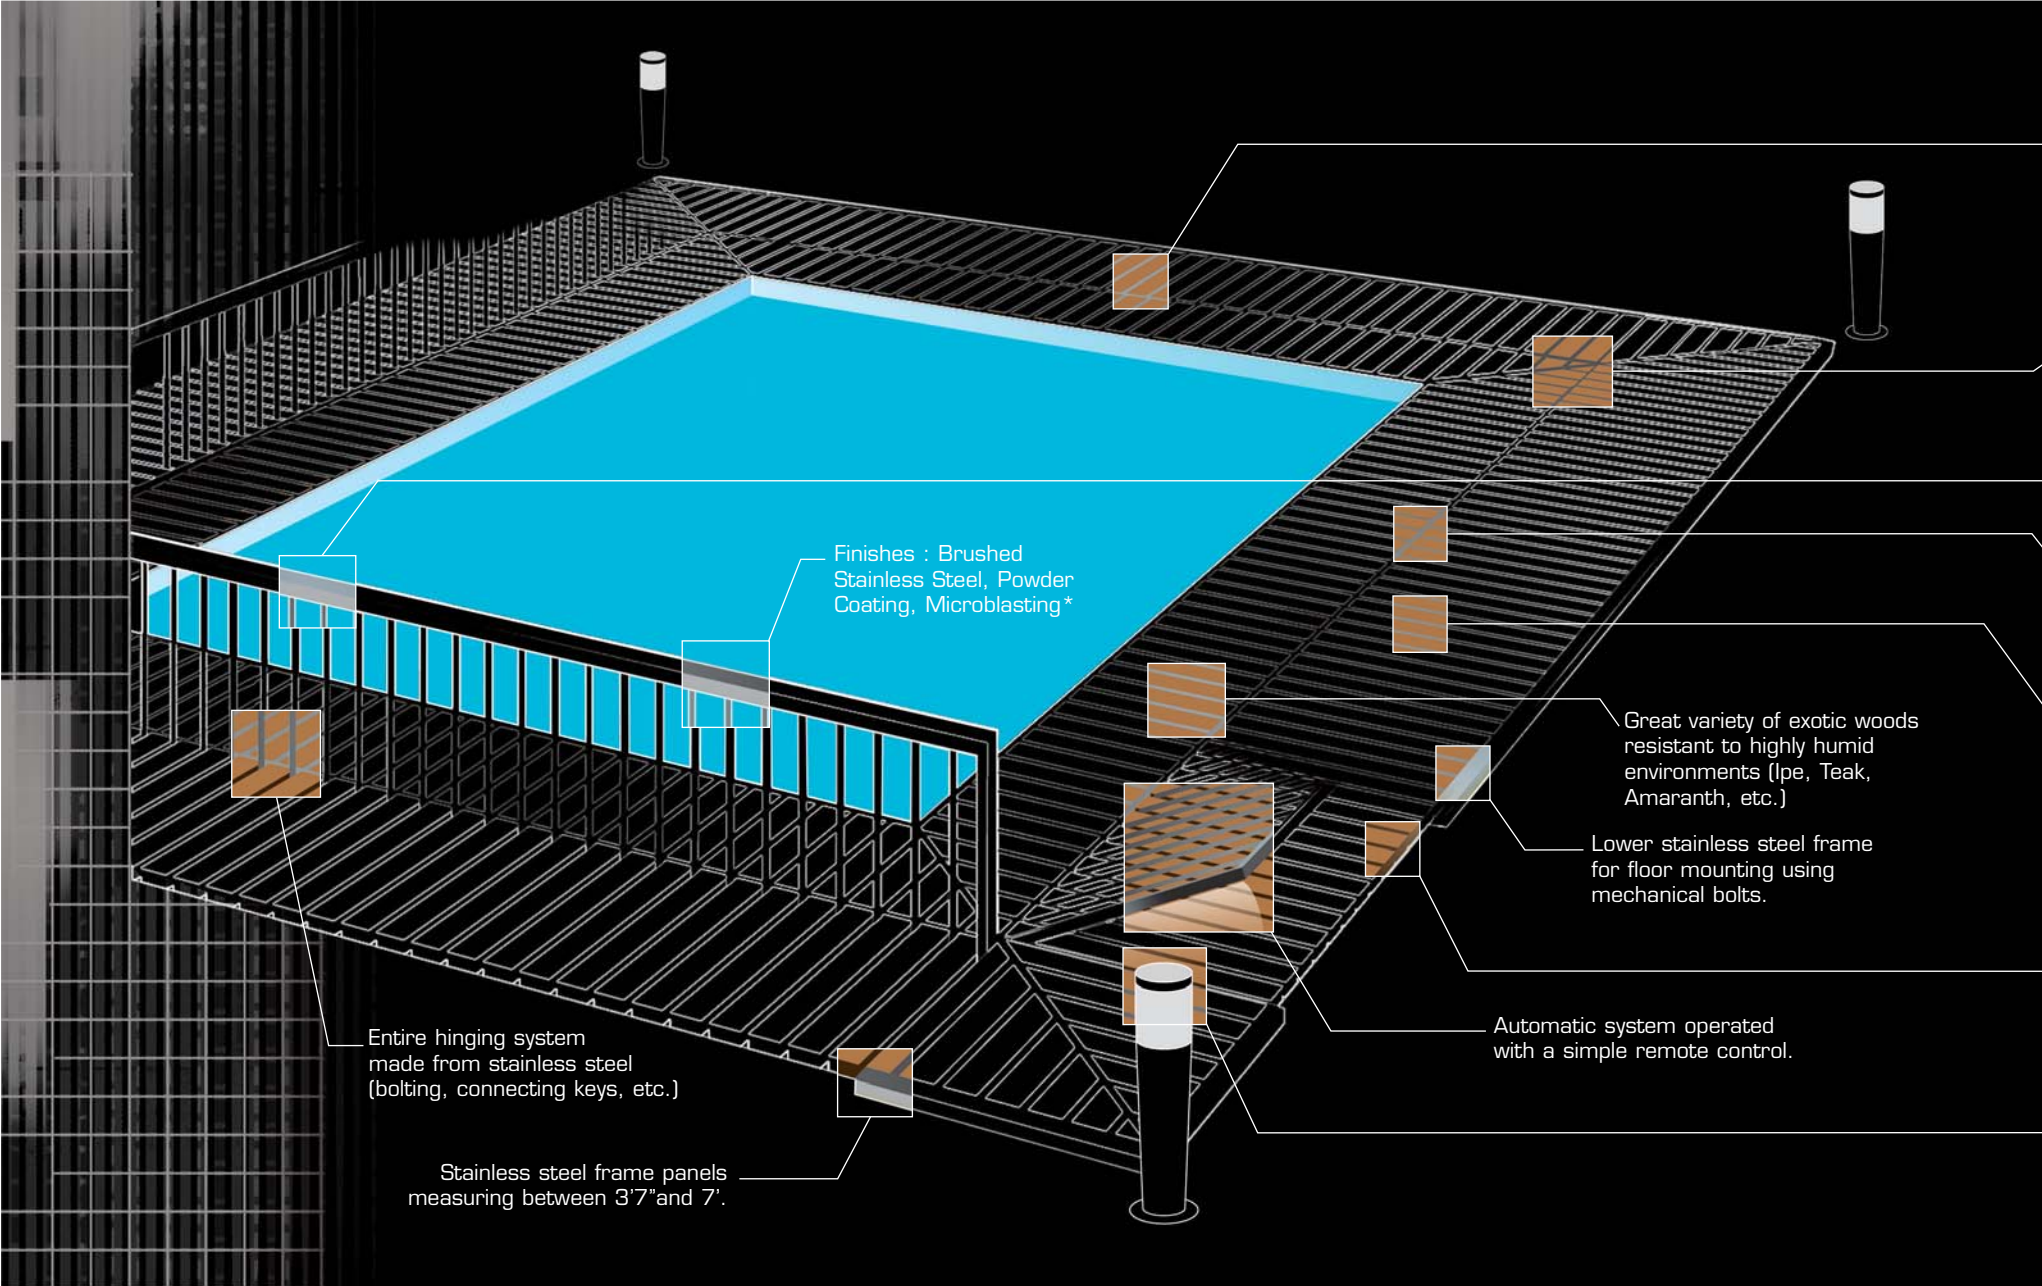

Diodon® Systems: A unique project manager for security, outer pool design and accessories

From feasibility to maintenance - Annual Maintenance Contract - including installation Diodon® assures you of "Clés en main" project with a unique interlocutor. The Diodon® performance includes the system itself, the additional decking - Diodeck - and a large range of accessories to finalize your project - lightings, showers, barbecues, etc.

Your interlocutor at Diodon® according to your needs will accompany you through the entire process to determine the most efficient and aesthetic solution.

Diodon® is the ultimate serenity for the most beautiful leisure space.
